The screenshot displays the Microsoft Azure portal interface. The top navigation bar shows the user is logged in as 'nikhild086@outlook.com'. The main content area is divided into two sections. The top section, titled 'Create a resource group', shows the 'Basics' tab selected. It includes fields for 'Subscription' (Azure for Students), 'Resource group name' (nikhil-rg-asgmt-az900), and 'Region' (Asia Pacific Central India). The bottom section, titled 'Resource Manager | Resource groups', shows a list of resource groups. The table below represents the data shown in this section:

Name	Subscription	Location
NetworkWatcherRG	Azure for Students	Central India
nikhil-rg-asgmt-az900	Azure for Students	Central India

Basics Security Address space Tags Review + create

Azure Virtual Network (VNet) is the fundamental building block for your private network in Azure. VNet enables many types of Azure resources, such as Azure Virtual Machines (VM), to securely communicate with each other, the internet, and on-premises networks. VNet is similar to a traditional network that you'd operate in your own data center, but brings with it additional benefits of Azure's infrastructure such as scale, availability, and isolation.

Create virtual network

Basics Security Address space Tags Review + create

Use virtual networks to isolate your resources and manage your network. When you deploy resources into a subnet, Azure assigns the resource an IP address from the subnet. [Learn more](#)

☐ Allocate using IP address pools. [Learn more](#)

+ Add a subnet

10.20.0.0/16

10.20.0.0 /16

10.20.0.0 - 10.20.255.255 65,536 addresses

Delete address space

Subnets	IP address range	Size	NAT gateway
nikhil-WebTier	10.20.10.0 - 10.20.10.255	/24 (256 addresses)	-

+ Add IPv4 address space

Advertised address prefixes

+ Add address prefix

Advertised gateway prefixes let you control route advertisements by specifying which IP address ranges Azure gateways advertise to on-premises networks, instead of advertising all virtual network and spoke CIDRs.

Starting address Size

Previous Next Review + create

https://portal.azure.com/?ocid=AIDcmfTeJ9v5_SEM_k_EAIaIQbChMqIyY_-DdIAmYmM:8A9d09_

Add a subnet

Select an address space and configure your subnet. You can customize a default subnet or select from subnet templates if you plan to add select services later. [Learn more](#)

Subnet purpose ☐ Default

Name *

IPv4

Include an IPv4 address space ☒

IPv4 address range

10.20.0.0 - 10.20.255.255

Starting address *

Size

Subnet address range

IPv6

Include an IPv6 address space ☐ This virtual network has no IPv6 address ranges.

Private subnet

Private subnets enhance security by not providing default outbound access. To enable outbound connectivity for virtual machines to access the internet, it is necessary to explicitly grant outbound access. A NAT gateway is the recommended way to provide outbound connectivity for virtual machines in the subnet. [Learn more](#)

Enable private subnet (no default outbound access) ☒

After March 31, 2026, private subnet will be the default selection for new virtual networks. [Learn more](#)

Security

Simplify internet access for virtual machines by using a network address translation gateway. Filter subnet traffic using a network security group. [Learn more](#)

NAT gateway

The image displays two screenshots of the Microsoft Azure portal interface. The top screenshot shows the 'Resource Manager | Resource groups' view for the 'nikhil-rg-asgmt-az900' resource group. An 'Add lock' dialog box is open, showing 'Lock name' as 'RG-LOCK' and 'Lock type' as 'Delete'. The 'Notes' field contains 'Prevent full resource group removal'. The bottom screenshot shows the 'Network foundation | Virtual networks' view for the 'nikhil-VNET-Main' virtual network. An 'Add lock' dialog box is open, showing 'Lock name' as 'VNET-LOCK' and 'Lock type' as 'Delete'. The 'Notes' field contains 'Prevent accidental VNet deletion'. Both screenshots show the Azure portal navigation pane on the left and the 'Add lock' dialog box in the center.

The screenshot shows the Microsoft Azure portal interface. The main content area displays the 'nikhil-VNET-Main' Locks page. The page includes a search bar, a list of resources, and a table of locks. The table has columns for Lock name, Lock type, Scope, and Notes. The locks listed are RG-LOCK and VNET-LOCK, both with a Delete lock type. The scope for RG-LOCK is 'nikhil-rg-asgntm-az900' and for VNET-LOCK is 'nikhil-VNET-Main'. The notes for these locks are 'Prevent full resource group removal' and 'Prevent accidental VNet deletion' respectively.

Lock name	Lock type	Scope	Notes
RG-LOCK	Delete	nikhil-rg-asgntm-az900	Prevent full resource group removal
VNET-LOCK	Delete	nikhil-VNET-Main	Prevent accidental VNet deletion

The screenshot displays the Windows Server Manager interface. The top navigation bar shows 'Server Manager' and 'Dashboard'. The main content area is titled 'WELCOME TO SERVER MANAGER' and features a 'QUICK START' section with five numbered steps: 1. Configure this local server, 2. Add roles and features, 3. Add other servers to manage, 4. Create a server group, and 5. Connect this server to cloud services. Below this, the 'ROLES AND SERVER GROUPS' section shows three server groups: 'File and Storage Services', 'Local Server', and 'All Servers', each with a count of 1. Each group has a 'Manageability' link and sub-links for 'Events', 'Services', 'Performance', and 'BPA results'. The Windows taskbar at the bottom shows the search bar, task view button, and several application icons, along with the system clock indicating 4:27 PM on 5/30/2026.

- Access <YourName>-WebVM web page from a browser using http://PublicIP and verify the default web page loads.

The screenshot displays the Microsoft Azure portal interface for a virtual machine named 'nikhil-WebVM'. The left sidebar shows the 'Virtual machines' section under 'Compute infrastructure'. The main pane shows the 'Overview' tab for the VM, which is running on Linux (ubuntu 24.04). Key details include: Status: Running, Location: Central India, Subscription ID: 40e55994-4306-48be-833a-78897eb08932, and Public IP address: 20.204.122.98. The 'Networking' section shows the VM is connected to a virtual network named 'nikhil-VNET-Main/nikhil-WebTier'.
